

Microsoft Windows Lockscreen Integration with Smart Card

Overview

Qsync is a registered smart card credential provider that will appear when the user presses the CTRL+ALT+DEL key combination. Automatically extracts the Microsoft Windows® domain password securely from the Smart Card and then logs the user onto the workstation and network. Monitors Smart Card and Domain passwords expiration and offers an easy to follow windows login wizard that changes these passwords. Securely locks the workstation on the removal of the smart card and offers a flexible settings options of not only locking a work station but also closing open web browsers on the machine.

Qsync automatically extracts the Microsoft Windows® domain password securely from the Smart Card and then logs the user onto the workstation and network.

Key Functions:

- ✓ Integrated login with Microsoft Windows® 7,8 and 10
- ✓ Reads and writes data via PKCS#11 to the smart card or token
- ✓ Applies business logic for creation, recovery and revocation of users
- ✓ Support for smart cards and tokens
- ✓ Securely locks the workstation on the removal of the smart card
- ✓ Integrates with WinMagic's SecureDoc disk encryption pre-boot for a seamless login
- ✓ Permits disabling of smart card removal lock feature
